

OSAGIE DANIEL

+234 901 079 4642 | danielosagie341@gmail.com

Professional Summary

Full-Stack JavaScript Engineer specializing in building scalable web and mobile applications using React, Next.js, React Native (Expo), and Node.js. Strong foundation in HTML, CSS, and JavaScript with a focus on clean UI architecture and efficient system integration. Experienced in designing and delivering real-world applications across web and mobile platforms, with additional expertise in teaching and mentoring developers. Adept at building RESTful APIs, managing application state, and deploying production-ready solutions. Focused on improving system design, performance optimization, and backend architecture to build robust, scalable software systems.

Core Competencies	Technical & Digital Skills
• Full-stack application development (web + mobile) • Component-based UI architecture • Strong organizational and time management skills • API integration and system communication • Ability to work independently and collaboratively in team settings • Debugging and performance troubleshooting • Eagerness to learn, grow and contribute to inclusive and efficient workplaces	• Languages & Frameworks: JavaScript (React, Next.js), Python, Tailwind CSS, React Native, Expo, Node.js, Express.js, MongoDB • Software Engineering: State Management(Redux, Context API), REST API Design, Authentication (JWT & Cookies), MVC Architecture, Responsive Design, Code Optimization, Debugging, API development. • Development Tools: Git, Visual Studio, GitHub, Postman, Vercel, MongoDB Atlas • Architecture & Design: Software Architecture, Design Patterns, Code Documentation • Other Tools: Microsoft Office Suite, Zoom, Teams

Professional Experience

Zion Study Center – Frontend / Full-Stack Instructor
Abuja, Nigeria | August 2025 – March 2026

- Designed and delivered structured training programs in HTML, CSS, and JavaScript for students at varying skill levels
- Mentored students in building real-world web applications, guiding them from fundamentals to project completion
- Reviewed and debugged student code, improving problem-solving ability and code quality
- Introduced modern frontend concepts including React and component-based architecture
- Simplified complex programming concepts into practical, understandable lessons
- Implemented and integrated APIs to ensure seamless functionality and data exchange.

- Leveraged Git for version control, troubleshooting bugs, code reviews and improving system reliability.
- Collaborated with Back-End Developers.
- Stayed updated with the latest mobile development trends and best practices.

Zion Study Centre Platform – Software Developer

- User authentication and role-based access.
- Student data management and content delivery.
- API-driven communication between mobile and web platforms.

Backend Architecture

- RESTful API built with Express.js
- Modular route and controller structure
- MongoDB for persistent data storage

Frontend Architecture

- Component-based UI using React and Next.js
- Tailwind CSS for responsive and scalable styling
- Mobile navigation implemented with React Navigation

Woost - Women's Health Research – mobile Developer

Remote (uk) | March 2025 – July 2025

- Built a women's health mobile app to support even women with irregular menstrual health due to pcos.
- Wrote clean, scalable code and implemented version control using Git.
- Implemented both offline and online app capability with smart syncing management between them.
- Collaborated with back-end developers and health consultants.

Education

Veritas University – Bwari Abuja, Nigeria

Bachelor of Science (B.Sc. Hons) in Computer

2022 – 2025

School For the Gifted, Gwagwalada, Abuja

West African Senior School Certificate (WASSCE)

2016 – 2019

Projects

Zion study center platform – React Native (Expo), Next.js, Node.js (Express), MongoDB

Authentication & Authorization · <https://zionstudycentre.com/login>

- **Student & Staff Registration & Login**

- Created **roles (student, staff & admin) onboarding flow** with validation, password hashing, and error handling.
 - Registration data persisted to **Mongo DB Database**.
- **Role-Based Authentication**
 - Secured student/staff and admin sessions using JWT token session management. Role-based access control for customer and admin views.
- **Account Management**
 - Implemented account creation linked to programme list.
 - Displayed programme management for student/staff dynamically.
- **Cloud Deployment**
 - Deployed the application to **Render(backend) / vercel(frontend)**.
 - Configured **Mongo DB** with connection string management, environment variables, and logging.
 - Implemented **remote migrations** and continuous integration via Visual Studio.
- **Error Handling & Logging Security - Monitoring unauthorized access or unusual activity**
 - Displayed friendly validation messages to users and custom error handling.

Industrial Object Tracking System – React, TypeScript, Axios, python(Flask, OpenCV, Ultralytics YOLOv8, PyTorch,): github.com/danielosagie341/industrial-object-tracking

- This is a real-time object detection and tracking system designed for industrial environments. It uses your computer's webcam (or any video source) to automatically identify and count three categories of objects: People/Personnel, Machinery/Equipment, Vehicles.
- Safety monitoring - Knowing how many people are in dangerous areas AI-driven analysis of potential cyber threats, complete with a confidence score.
- Resource management - Tracking equipment usage and availability
- Security - Monitoring unauthorized access or unusual activity
- Efficiency - Understanding workflow patterns and bottlenecks

Academic Research Project

Final Year Thesis: **Advanced Persistent Threat Intelligence Platform – React, React Router, Recharts (for charts), React-Globe.gl (for 3D globe), Express js, python:** <https://aptip-frontend.onrender.com>

- APTip is a comprehensive, full-stack web application designed to provide users with a suite of advanced cybersecurity tools. It integrates artificial intelligence and various external APIs to offer real-time threat intelligence, making it a powerful tool for security analysts, researchers, and enthusiasts.
- AI-Powered Threat Analysis: Paste any text (like emails, articles, or logs) to get an AI-driven analysis of potential cyber threats, complete with a confidence score.
- Live Threat Globe: An interactive 3D globe visualizing mock real-time cyber threats originating from and targeting different countries.
- IP Reputation Checker: Check the risk profile of any public IP address. The tool provides detailed information, including the abuse confidence score, country, and ISP, by integrating with the AbuseIPDB API.

- CVE Search: Search the National Vulnerability Database (NVD) for specific Common Vulnerabilities and Exposures (CVEs) by keyword and date range.
